

Foresight

Enterprise Security Management

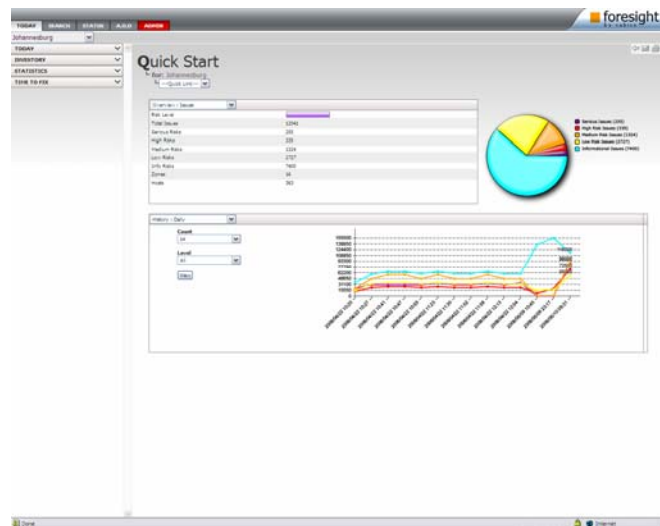

Proactive, Centralized Security Management

Foresight is an automated end-to-end security management platform that covers the full spectrum of security requirements from enterprise vulnerability management through to policy compliance auditing. By understanding each organizations unique business, Foresight adds value by correlating vulnerability management and compliance audit to fiscal risk values so that organizations can understand the financial risk the IT landscape poses over time, and operationally drive that risk down as required by the business.

Foresight empowers you to reduce enterprise wide risk within and around the operational backbone by identifying risk issues within both business-critical and operational IT resources, correlating them with validated vulnerabilities & policy violations and providing risk-based task-lists with dynamic instructions for step-by-step remediation.

Foresight provides you with the ability to proactively manage and easily mitigate IT risk across your business, enabling you to secure your environment on-time and under-budget through multi-tier facilities, data historians, trend analysis and comprehensive statistical & technical information.

By making use of extensive 'drill-down' functionalities and security information, enterprise risk can be analyzed in real-time and over-time from specific operational units, geographical perspectives, application groups and system types. However you wish to analyze your IT risk, Foresight provides you with the ability to easily customize your organizational criteria, down to individual components within your IT infrastructure.

Foresight Leverages off of the international CVE and CVSS standards to comply with the most up-to-date and globally accepted security measurements. Hourly updates are forced to ensure that your business is able to address security problems as soon as they arise.

Providing you with security management on a micro and macro level, Foresight ensures that you can seamlessly conduct your business, simplifying the task of centrally administering and eliminating IT risk throughout the enterprise.

Deployment

Foresight has been designed to integrate into your business as simple as possible, with absolutely no agent software required on any audited system. Deployment is as simple as plugging the Foresight appliance into your network and configuring it through its intuitive web interface. In addition, through the use of Foresight's native Public Key Infrastructure (PKI), digital certificates are immediately available for distribution to conduct secure policy compliance auditing.

Security Management

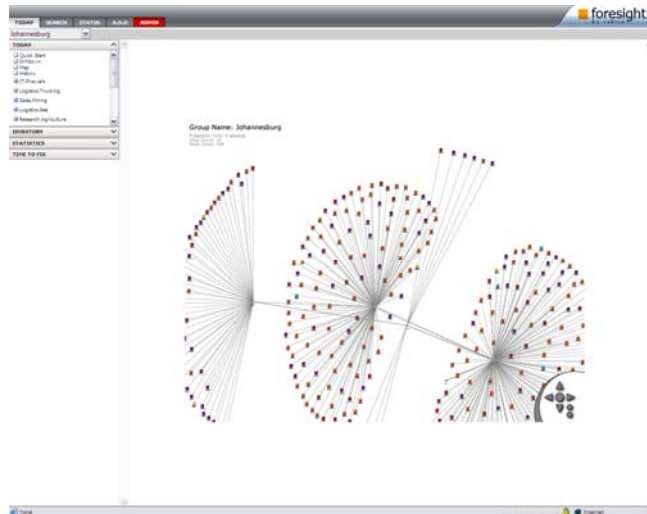

By proactively empowering you to properly manage your IT risk, Foresight gives your business the edge ~ and provides true vulnerability management and policy compliance throughout your organizations cross-platform, heterogeneous IT infrastructure.

Powerful, comprehensive remediation recommendations and solutions addressing all security issues are made available to targeted personnel.

Foresight, a leading security solution that takes a holistic approach to vulnerability management and policy compliance, is uniquely positioned to provide your business with best-of-breed technology that spans your business in an end-to-end fashion; enabling you to securely and effectively embrace and adopt new opportunities, improve operational efficiencies, reduce costs and proactively manage IT business risk.

Foresight converts your IT centers from traditional 'cost-centers' into 'value-centers', empowering your existing technology investments and IT personnel to maximize your businesses potential through IT – ensuring that your business operates efficiently and seamlessly.

With Foresight, your IT complement is able to focus their time and expertise on business elements, freeing them from the burden of manually identifying security concerns and dealing with 'firefighting' activities.

The screenshot displays a detailed report of security issues in the Foresight web interface. The report is organized into a table with columns for 'ID', 'Description', 'Severity', 'Status', 'Age', and 'Count'. The table lists various security issues, such as 'Account lockout', 'Password complexity', and 'User enumeration'. The issues are color-coded by severity, with red indicating high severity and green indicating low severity. The report also includes a summary of the total number of issues and a breakdown by severity level.

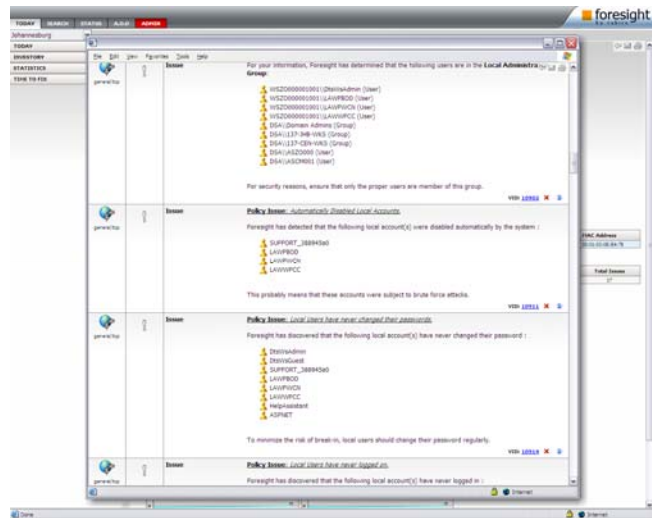

ID	Description	Severity	Status	Age	Count
1001	Account lockout	High	Open	1 day	10
1002	Password complexity	Medium	Open	2 days	5
1003	User enumeration	Low	Open	3 days	2
1004	Account lockout	High	Open	1 day	10
1005	Password complexity	Medium	Open	2 days	5
1006	User enumeration	Low	Open	3 days	2
1007	Account lockout	High	Open	1 day	10
1008	Password complexity	Medium	Open	2 days	5
1009	User enumeration	Low	Open	3 days	2
1010	Account lockout	High	Open	1 day	10
1011	Password complexity	Medium	Open	2 days	5
1012	User enumeration	Low	Open	3 days	2
1013	Account lockout	High	Open	1 day	10
1014	Password complexity	Medium	Open	2 days	5
1015	User enumeration	Low	Open	3 days	2

Delivering Value

Cubico Solutions and its partners are committed to keeping your interests at the forefront by delivering value through quality, innovative, value-added solutions and services.

Standards and Compliance

Sound information security is the cornerstone of sensible corporate governance. The core building blocks of Foresight empower your organization to better comply by aligning you to the ISO17799 / ISO27002 standards.

Foresight makes extensive use of the Common Vulnerability Scoring System metric coupled with the Common Vulnerabilities and Exposures (CVE) Library.

Foresight empowers you to comply with law and legislation (including *[but not limited to]* the ECT Act of 2002 - South Africa).

Technical Resources

Helping you derive the most value from your Foresight investment, we provide you with unimpeded access to our highly knowledgeable and diverse technical teams throughout all stages of the project lifecycle; from implementation and ongoing monitoring, to regular strategy sessions and targeted workshops.

Conclusion

Understanding enterprise risk within the information technology layer that drives your company is no longer a luxury, it is a business imperative that can ultimately ensure the performance of your bottom-line. Foresight has been designed to enable you to quickly and accurately identify and mitigate IT risk, regardless of your businesses complexity or uniqueness.
